

Nordic FHIR Terminology Server

Mattias Colliander

Daniel Karlsson

Michael Lawley

Vadim Peretokin

Special thanks to this dedicated team for their invaluable contributions to a robust, scalable terminology platform, laying the foundation for enhanced Nordic healthcare interoperability!

Technical Implementation: Core Infrastructure

Cloud Hosting

Leveraging **Cleura** cloud platform for regional data residency and high availability.

Underlying Infrastructure

OpenStack provides a flexible and powerful open-source foundation for scalable virtualisation.

Deployment Stack

Containerised using **Docker** on **Ubuntu 24.04 LTS**

4

CPU Cores

16GB

RAM

—

fhir.org Subdomain

Strategic placement ensures trusted alignment with HL7 FHIR Foundation standards.

Exploring the Nordic FHIR Terminology Server

Access via FHIR APIs / Postman

Build IGs

./_genonce.sh -tx <https://tx-nordics.fhir.org/fhir>

Browse via Shrimp

Runtime use

No! Syndicate to a local TX server instead
